Protect your target with an IP filter.

Configure the service to support less secure authentication mechanisms only over an encrypted channel.

Contact the vendor or consult product documentation to disable CBC mode cipher encryption, and enable CTR or GCM cipher mode encryption.

Review the contents of the site's robots.txt file, use Robots META tags instead of entries in the robots.txt file, and/or adjust the web server's access controls to limit access to sensitive material.

Review the list of methods and whether they're available over an encrypted channel.

Set a non-permissive Content-Security-Policy frame-ancestors header for all requested resources.

Reorder the certificates in the certificate chain.
